Study information

Scientific Title

Enhancing recovery of patients admitted to acute settings with hip fracture who are identified as experiencing confusion: a multi-centre, cluster-randomised controlled, feasibility trial of the PERFECTED Enhanced Recovery (PERFECT-ER) care versus standard acute care

Acronym

PERFECTED CRCT

Study objectives

The aim of this study is to investigate the feasibility of conducting a large scale trial to evaluate the reliability, effectiveness and cost of delivering care via the processes and initiatives set out by the PERFECT-ER intervention.

Ethics approval required

Old ethics approval format

Ethics approval(s)

04/07/2016, ref: 16/LO/0621

Study design

Randomised; Interventional; Design type: Process of Care, Education or Self-Management, Management of Care, Rehabilitation

Primary study design

Interventional

Study type(s)

Treatment

Health condition(s) or problem(s) studied

Specialty: Ageing, Primary sub-specialty: Ageing; UKCRC code/ Disease: Neurological/ Other degenerative diseases of the nervous system

Interventions

Ten hospitals from five regions will be assigned either active or control status (five hospitals per arm). Each region will have two hospitals, one active and one control. Active arm study hospitals will implement the PERFECT-ER intervention on a single acute trauma ward. Control arm study hospitals will select a single acute trauma ward and deliver treatment as usual in that setting.

Intervention Type

Other

Primary outcome(s)

Feasibility outcomes:

1. Recruitment rate
2. Retention rate

Key secondary outcome(s)

Not provided at time of registration

Completion date

31/07/2018

Eligibility

Key inclusion criteria

1. Patient must have had a confirmed proximal hip fracture requiring an operation and be aged 60 or older at time of operation
2. Patient has a pre-op AMTS of 8 or below (including those with 0 because of an inability to answer questions)
3. Patient must have a 'suitable informant' (e.g. relative, unpaid or paid carer, care home manager) who has a minimum of once a week face-to-face contact with the patient and is able, and consents to, provide information on proxy measures
4. Patient and a 'suitable informant' must be recruited into the trial within 5 days of the hip fracture operation
5. Patient must spend a minimum of 5 days on the study ward

Participant type(s)

Patient

Healthy volunteers allowed

No

Age group

Adult

Sex

All

Total final enrolment

282

Key exclusion criteria

1. Decision taken not to have hip surgery
2. Patient not expected to survive beyond 4 weeks and therefore it is unlikely that follow-up data will be collected

Date of first enrolment

01/11/2016

Date of final enrolment

31/01/2018
